

Joseph Taylor EXPAND

Joseph Taylor

I am a sophomore at the University of Maryland and I am studying Immersive Media Design
I enjoy playing video games, working out, and watching anime. I have only really been
doing art for the past year but hope to get more into digital art specifically 3D design in the
near future.

I am not really much of an artist, typically the only “art” I ever do is small doodling during classes. However, I have taken some art classes related to my major and the University of Maryland and my art mainly consisted of traditional pencil and paper on 11 x 14 sketch paper as well as some paintings. My art doesn’t fall under some genre or message I try to demonstrate, I just

create whatever comes to mind and experiment as I go.

Recently I have been trying more digital form of creation such as Photoshop and Maya, which is a software for creating 3D models. I find these forms of creation to be more interesting and more my style. While I am no artist, I am a bit of a

perfectionist when creating projects, wanting a line to be perfectly curved or straight, the perfect blend of two colors, or something else. As someone who is limited by my knowledge and skills in traditional art, I find that digital art allows me to achieve the “perfect” lines, curves, and color I want. I also find that digital art allows me to explore and try new things because of how easy it is to undo something you did,

this also makes it easy to correct mistakes.

My art it mainly for entertainment using bright colors and interesting models that the viewer may find unique or interesting. I also am into gaming such as VR and like to use these models and other creations of art in my VR creations. This allows me to create more complex and interesting ideas with my art as well as new ways to view it. I am hoping to be
